BrightLine® single-band filter set, optimized for DAPI and other like fluorophores

Brightest DAPI set on the market. This unique "flamethrower" filter set is recommended for those who want to achieve the highest brightness for the shortest possible exposure times, or for very low fluorophore concentrations. This set exhibits up to 5 times more brightness but has lower contrast and more photobleaching.

Individual filters and filter sets (no cube):

These filter sets contain individual filters. For filter sets already mounted in a holder/cube, scroll down to see complete mounted sets with cube.
